

SA-W

Automatic wicket bag making machine

ELBA

The **SA-W** machine has been designed to produce a wide range of wicket bags like bottom gusseted bags, bread bags, chicken bags, hygienic bags and diaper bags (both with cross handle or paramount shape). The machine design offers to the customer a really high flexibility in both bag type and sizes, in order to maximize the investment with a short term payback.

The **SA-W** is fully servo driven and equipped with the latest state-of-the-art components that, controlled by a HMI based on Siemens Profinet® protocol, allows to control independently and in real time each one of all installed stations/tools.

As set up and changeover time are critical, Elba designed the **SA-W** model to grant short and easy job changing.

Machine easy accessibility for set up and maintenance is granted by the new frame design too.

Basic SA-W model:

- Compact automatic unwinder system
- Monofolding unit and edge guide device
- Automatic servo driven sealing and cutting station
- Three independent draw rollers
- Pneumatic perforation unit (wicket holes and anti-tear)
- Rotating wicket collection with 400 mm, 600 mm, 800 mm arms length

Available options:

- Cross handle forming system
- Paramount shape device
- Round bottom punching unit "Chicken bag"
- Block notes sealing system

STANDARD	ON REQUEST
LDPE-LLDPE-HDPE-PP and MIXTURES	

		SA-W 06	SA-W 09	SA-W 12
Useful welding width	mm	650	950	1250
Min. bags length	mm	100	100	100
Number of bags per stack		250	250	250
Max. mechanical speed	strokes/min	400	400	150
Max. film speed	m/min.	120	120	120

*Max speed depends on wicket arms length.
